Robert,

Can you please send my way Administrator McCarthy's official statement made yesterday in Colorado where she mentioned that EPA will be conducting an official internal and external investigation into the events that triggered the release of the minewater. I need that statement for a story I am writing today! Thanks.

Sincerely,
Daniel Bloom

FOR IMMEDIATE RELEASE

August 12, 2015

NOTE: We are re-sending this news release in case some of you didn't receive it when we originally sent it late Wednesday night.

EPA Statement on Colorado data from Gold King Mine Release

DURANGO, CO – To assess the impacts of the release at the Gold King Mine near Silverton, Colorado, water quality samples were collected at numerous intervals beginning on Aug. 5, 2015. Samples were taken prior to the plume's arrival to establish a baseline for water quality comparisons. Each surface water sample was analyzed for 24 metals, including arsenic, cadmium, lead, and mercury.

Analysis now shows that water quality for the Animas River from the Silverton, Colo. area to the Durango municipal water intake has returned to pre-event water quality levels. These results are based on validated sampling data collected from Aug. 5 to Aug. 9, 2015.

EPA has shared this data with state, local and tribal officials in Colorado to assist them in their decisions regarding the on-going use of water resources. EPA plans to continue to monitor, analyze and share data for downstream river segments as it becomes available.
